Mail Stop Petitions
Honorable Commissioner for Patents
P.O. Box 1450
Alexandra, VA 22313-1450

PETITION UNDER 37 CFR 1.182

Dear Sir,

Applicants hereby petition the Commissioner under 37 CFR 1.182 to delay issuance of the present application until the Examiner has reviewed and considered art filed in an Information Disclosure Statement on December 29, 2003 and enter an amendment filed on January 20, 2004, to ensure that the correct information appears in the patent issuing on the present application. This petition is being filed concurrently with payment of the Issue Fee.

Enclosed herewith are the following:

- Copy of a stamped postcard receipt showing that an Information Disclosure Statement was received by the OIPE on December 29, 2003. (Exhibit A)
- Copy of a stamped postcard receipt showing that an amendment was received by the OIPE on January 20, 2004. (Exhibit B)
- Copy of the Information Disclosure Statement including a copy of the 1449 forms. (Exhibit C)
- Copy of the Amendment filed on January 20, 2004. (Exhibit D)
- The petition fee set forth in 37 CFR 1.17(h). See attached transmittal letter for deposit account authorization.

REMARKS

Applicants hereby petition the Commissioner to delay issuance of the present application so as to allow the Examiner to consider art filed in an Information Disclosure Statement on December 29, 2003 and enter an amendment filed on January

20, 2004, to ensure that the correct information appears in the patent issuing on the present application.

On December 17, 2003 applicants filed an Information Disclosure Statement including a 5-page 1449 form and 71 pieces of art (hereinafter "the IDS"). The IDS was received by the OIPE on December 29, 2003, as evidenced in the attached acknowledgement postcard (Exhibit A).

On January 14, 2004, pursuant to a telephone conversation between applicants' representative and the Examiner held the day before, applicants filed an amendment to claims 8 and 33 (hereinafter "the amendment"). The amendment was received by the OIPE on January 20, 2004, as evidenced in the attached acknowledgment postcard (Exhibit B).

Upon review of the Notice of Allowance dated January 20, 2004 (hereinafter "the notice"), it was noted that the Examiner did not return the 5-page 1449 form initialed. Also, the Examiner made an Examiner's amendment to claims 8 and 33 to correct typographical errors, but did not acknowledge the amendment filed by applicants which further, though slightly, amended claim 8 to make it more readable without changing its scope.

Applicants' representative contacted the Examiner and requested a supplemental Notice of Allowability, reflecting consideration of the IDS and the amendment, in order to ensure that the patent issues with the correct information.

However, the Examiner explained that since he is unable to obtain the file at this stage, it is advisable that applicants file a Request for Continued Examination (RCE).

Applicants believe that since the IDS and the amendment were timely filed, an RCE is not required at this stage. Therefore, applicants are resubmitting a copy of the IDS, less copies of the cited art, (Exhibit C) and a copy of the amendment (Exhibit D) and respectfully request that the issuance of the present application be delayed so as to permit the Examiner to obtain the file, consider the art, initial the 1449 form, enter the amendment and issue a Supplemental Notice of Allowance accordingly.

Prompt consideration of this Petition is respectfully requested.

INFORMATION DISCLOSURE STATEMENT

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Sir:

Applicants respectfully direct the attention of the Examiner to art cited with respect to 10/089,631 which is a U.S. national application under 35 U.S.C. §371 of PCT/IL99/00600.

The Examiner is respectfully requested to review and consider this art, in accordance with MPEP 2001.06, MPEP 1893.03(e) and MPEP 1893.03(g) and to indicate in the first office action that he has considered this art. Additionally, the Examiner is respectfully requested to cite those prior art publications mentioned in this application which the Examiner considers to be material or relevant to the present claims.

Further, in order to comply with discretionary regulations 37 C.F.R. §1.97 and §1.98, attached is Form PTO-1449 listing the cited art. Also attached are copies¹ of the art. This art contains information which the Examiner may consider to be important in deciding whether to allow the present application to issue as a patent. Applicants wish to point out that items 26, 30, 31 and 51 were cited on the PCT International Search Report. Copies of these items are not attached as they are available in the national stage file.

Since item 51, EP Publication No. 0 616 886, is in a foreign language, applicants provide a corresponding US patent number 5,385,091. Both items are listed on the attached PTO-1449 form with a connecting arrow between them.

German patent DE 196 35 388 (item 12), European patent EP 0 570 786 (item 16) and

¹ To the extent that a document is listed and no copy of same is attached, then such document is not at the present time available to the undersigned or is available in the national stage file. If a listed document is not in the English language and an English translation is readily available, such translation is also attached; if translation is not attached, it is not readily available to the undersigned. If a foreign language patent document is cited, and an English language equivalent is known to the undersigned, then such an equivalent patent is also cited on the attached form along with the corresponding foreign language patent and a connecting arrow indicated therebetween; if no such English language equivalent is cited then none is known to the undersigned.

UDY

EP 0 861 722 (item 31,) are in a foreign language. Applicants attach copies of an English language abstract to their respective references.

Items 63-67 are in a foreign language, applicants provide their respective corresponding US patents. Both the foreign and the US patents are listed on the attached PTO-1449 form with a connecting arrow between them.

In accordance with MPEP Section 609 it is requested that each document cited (including any mentioned in Applicants' specification which is not repeated on the attached PTO-1449 form) be given thorough consideration and be cited of record in the prosecution history of the present application by initialing on the PTO-1449 form, so that it will appear on the face of the patent issuing on the present application, even if the Examiner does not consider it sufficiently pertinent to use in a rejection, or otherwise does not believe that the guidelines for citation have been fully complied with.

The present Information Disclosure Statement is being submitted in compliance with 37 C.F.R. §1.56 as an Examiner might consider any cited document important in deciding whether to allow the application to issue as a patent, but the citation of each document is not to be construed as an admission that such document is necessarily relevant or prior art. No representation is intended that the cited documents represent the results of a complete search, and it is anticipated that the Examiner in the normal course of examination, will make an independent search and will determine the best prior art consistent with 37 C.F.R. §1.104(a), and in the course of such search will review for relevance every document cited on the attached form.

Early and favorable consideration is earnestly solicited.

Respectfully submitted,
Aron SHMAISER, et al.

AMENDMENT

Sir:

Further to a telephone communication from the Examiner, kindly amend the application as follows:

CLAIMS

Kindly replace the present claims with the following claims:

1. (canceled)
2. (Previously presented) A tandem printer according to claim 8 wherein the sensor which measures the position of an edge of the substrate is situated on the rotatable element.
3. (Previously presented) A tandem printer according to claim 8 wherein the sensor which measures the position of an edge of the substrate is adjacent to the rotatable element.
4. (canceled)
5. (Previously presented) A tandem printer according to claim 8 wherein the flexible strip rotates at a constant rate.
6. (Previously presented) A tandem printer according to claim 8 wherein the flexible strip is a timing belt.
7. (canceled)
8. (Currently amended) A tandem printer with a mechanism for fine substrate-position correction, comprising:
 - a first printing station;
 - a second printing station;
 - a transfer system which transfers the substrate from the first printing station to the second printing station, comprising:
 - a rotatable element, rotating at a given rotation rate, that receives the substrate after printing thereon by the first printing station and transfers the substrate toward the second printing station;

a sensor which measures the position of an edge of the substrate during its transfer from the first printing station to the second printing station;

a flexible strip, traveling at a given rate and providing motion to the rotatable element, wherein a corrective step displacement of the flexible strip induces a corrective step change in angular position of the rotatable element;

a controller, which applies a corrective step change in angular position of the rotatable element responsive to the measurements of the sensor, without changing the general rotation rate of the rotatable element via a step displacement of the flexible strip; and

two pulleys, situated along the flexible strip, one upstream and one downstream of the rotatable element, said pulleys pressing into the flexible strip at a first point and a second point, respectively, wherein when pressure of one pulley is partially released, the other pulley takes up the thus produced slack, providing the corrective step displacement of the flexible strip.

9. (original) A tandem printer according to claim 8 and comprising:

a rod, comprising two points, to which the two pulleys are attached, one at each edge, wherein linear movement of the rod provides the motion of the pulleys into and away from the flexible strip.

10. (original) A tandem printer according to claim 9 and including a motion provider for the rod, comprising:

an eccentric shaft to which the rod is attached; and
a motor which provides motion to the eccentric shaft,
wherein the motor is activated by the controller.

11. (original) A tandem printer according to claim 9 and including a motion provider for the rod, comprising:

a slider-crank mechanism, wherein the rod is attached to the slider and moves in the same direction as the slider; and
a motor which provides motion to the slider-crank mechanism,
wherein the motor is activated by the controller.

12. (original) A tandem printer according to claim 9 and including a motion provider for the rod, comprising:

a piston-cylinder mechanism, wherein the rod is attached to the piston and moves in the same direction as the piston; and

a motor which provides motion to the piston-cylinder mechanism,
wherein the motor is activated by the controller.

13. (original) A tandem printer according to claim 9 and including a motion provider for the rod, comprising:

a turning-screw mechanism, wherein the rod is attached to the screw and moves in the same direction as the screw; and

a motor which provides motion to the turning-screw mechanism,
wherein the motor is activated by the controller.

14. (Canceled)

15. (original) A tandem printer according to claim 8 and comprising:

a shaft on which one of the two pulleys is mounted, pressing against the flexible strip at a first point; and

a resilient device on which the other pulley is mounted, resiliently pressing against the flexible strip at a second point,

wherein linear movement of the shaft provides motion of the pulley at the first point, and the response of the resilient device to release or demand in slack provides motion of the pulley at the second point.

16. (original) A tandem printer according to claim 15, wherein the shaft is an eccentric shaft and including:

a motor which provides motion to the eccentric shaft,
wherein the motor is activated by the controller.

17. (Original) A tandem printer according to claim 15 and including a motion provider for the shaft, comprising:

a slider-crank mechanism, wherein the shaft is connected to the slider and moves in the same direction as the slider; and

a motor which provides motion to the slider-crank mechanism,
wherein the motor is activated by the controller.

18. (original) A tandem printer according to claim 15 and including a motion provider for the shaft, comprising:

a piston-cylinder mechanism, wherein the shaft is connected to the piston and moves in the same direction as the piston; and

a motor which provides motion to the piston-cylinder mechanism,
wherein the motor is activated by the controller.

19. (original) A tandem printer according to claim 15 and including a motion provider for the shaft, comprising:

a turning-screw mechanism, wherein the shaft is connected to the screw and moves in the same direction as the screw; and

a motor which provides motion to the turning-screw mechanism,
wherein the motor is activated by the controller.

20. (canceled)

21. (previously presented) A tandem printer according to claim 8 wherein the two pulleys are substantially identical.

22. (previously presented) A tandem printer according to claim 8, wherein the section of the flexible strip adjacent to the first point and a section of the flexible strip adjacent to the second point are parallel to each other.

23. (Previously presented) A tandem printer according to claim 8, wherein the tandem printer comprises a duplex printer for printing on both sides of the paper while inverting it.

24. (Previously presented) A tandem printer according to claim 8, wherein the tandem printer comprises a multicolour printer of single-side printing, with each colour being printed with a different one of the tandem series of printing engines.

25. (Previously presented) A tandem printer according to claim 8, wherein the tandem printer is a conventional printer which uses plates.

26. (Previously presented) A tandem printer according to claim 8, wherein the tandem printer is an electrostatic printer.

27. (Previously presented) A tandem printer according to claim 8, wherein the tandem printer is an electronic printer.

28. (Previously presented) A tandem printer according to claim 8, wherein the tandem printer is a lithographic printer.

29-32. (Canceled)

33. (currently amended) A method of applying a fine positional correction to a substrate on a tandem printer, comprising:

printing on a substrate by a first printing station;

transferring the substrate from the first printing station toward a second printing station,

comprising:

mounting the substrate on a rotatable element of a substrate-transfer system; and

moving the substrate by rotating the rotatable element at a given rotation rate;

measuring the angular position of an edge of the substrate on the rotatable element; and

applying a step angular displacement to the rotatable element, responsive to the measurement, without changing the rotation rate of the rotatable element,

wherein rotating the rotatable element at a given rotation rate ~~comprises~~rotating comprises
rotating the rotatable element by a flexible strip;

wherein applying the step angular displacement to the rotatable element comprises
applying a step displacement to the flexible strip, comprising either a positive and negative step
displacement to the flexible strip, thus inducing a clockwise and a counterclockwise step angular
displacements to the rotatable element; and

applying the positive step displacement to the flexible strip comprises:

releasing flexible strip slack upstream of the rotatable element; and

taking up flexible strip slack downstream of the rotatable element; and

wherein applying the negative step displacement to the flexible strip comprises:

releasing flexible strip slack downstream of the rotatable element; and

taking up flexible strip slack upstream of the rotatable element.

34. (original) A method according to claim 33 and including using a lookup table to calculate a
necessary step displacement of the flexible strip in order to achieve a desired step angular
displacement of the rotatable element.

35. (Previously presented) A method according to claim 33 wherein the flexible strip is driven
by a driving pulley, rotating at a constant rotation rate.

36. (Previously presented) A method according to claim 33 wherein the flexible strip is a
timing belt.

UDY A03

REMARKS

The present application now contains claims 2, 3, 5, 6, 8-13, 15-19, 21-28 and 33-36. Claims 8 and 33 are amended herewith.

In a telephone call to Mr. William Dippert, the Examiner indicated that certain transcription and typographical errors were present in the previous amendment, namely that a portion of claim 4 was not included in the amendment of claim 8 and that there was a typographic error in claim 33. The present amendment corrects these error. Claim 8 has been further, slightly amended to make it more readable, without changing its scope.

In view of the above, applicants submit that application is ready for allowance. Notice to that effect is respectfully solicited.

Applicants note however, that an Information Disclosure Statement has been filed since the filing of the last response. The Examiner is respectfully requested to return an initialed copy of the forms 1449 attached thereto with the next action.

Respectfully submitted,
A. SHMAISER, et al.

LETTER TO EXAMINER

Applicants would like to point out that the Notice of Allowability erroneously acknowledges a claim for foreign priority as well as receipt of the certified copies in this national stage application from the International Bureau. Applicant would like to clarify that although this application is a national phase application, it does not claim any foreign priority.

Additionally, applicants wish to note that a Change of Name of assignee, from Indigo N.V. to Hewlett-Packard Indigo B.V., was filed on May 28, 2003. Although the recordation of the name change has not yet been received, applicants are using the correct name of the assignee on the Part B – Fee(s) Transmittal. Applicants look forward to receiving the reel/frame number of the recording of the Change of Name in due course.

Lastly, applicants wish to bring to the Examiner's attention that a Petition under 37 CFR 1.182 to delay issuance of the present application until the Examiner has reviewed and considered art filed in an Information Disclosure Statement on December 29, 2003 and enter an amendment filed on January 20, 2004, is being filed concurrently with issue fee payment in order to ensure that the correct information appears in the patent.

Title: TANDEM PRINTING SYSTEM WITH FINE PAPER-POSITION CORRECTION

TO THE COMMISSIONER FOR PATENTS:

Transmitted herewith is:

Petition Under 37 CFR 1.182, including:

1. Stamped postcard receipt showing that an IDS was received by the OIPE on December 29, 2003 (Exhibit A).
2. Stamped postcard receipt showing that an amendment was received by the OIPE on January 20, 2004 (Exhibit B).
3. Copy of IDS incl. a 5-page 1449 form (Exhibit C); Copy of Amendment filed on January 20, 2004 (Exhibit D).
4. Petition fee set forth in 37 CFR 1.17(h), see below for deposit account authorization.

in the above identified application.

- ☐ No additional fee is required.
- ☐ A check in the amount of _____ is attached.
- ☒ The Director is hereby authorized to charge and credit Deposit Account No. 03-3419 as described below.
- ☒ Charge the amount of \$130.00
- ☒ Credit any overpayment.
- ☒ Charge any additional fee required.
